

Encryption in Transit Policy

Policy Statement:

We utilize Google Cloud Platform (Firebase) for all backend infrastructure. Firebase enforces TLS 1.2 or greater for all network connections that transmit Platform Data.

Security Compliance:

~~Platform Data is never transmitted without encryption in transit: All data transmitted over public networks is encrypted via TLS 1.2 or higher.~~
~~SSL version 2 and SSL version 3 are never used: Our infrastructure strictly prohibits the use of these outdated and insecure protocols.~~
